Abstract

Collaborative language learning is an important aspect of increasing student engagement and motivation in the classroom. The Penta helix model, which integrates the efforts of government, academia, the private sector, the community, and the media, offers a unique approach to fostering a collaborative learning environment. By leveraging the strengths of each stakeholder, the Penta helix model can create a synergistic effect that motivates students to learn and engage with materials more effectively. Based on this explanation, the researcher formulated the problem: has there been collaboration in language learning in government, academia, private sector, community, and media to enhance student motivation? The answer the formulation of the problem, the researcher used a qualitative approach with document analysis techniques. This research examined various documents, including books, research articles, and curriculum documents. The result of this study is that by integrating these stakeholders, the Penta helix model can create a comprehensive and effective approach to language teaching that meets the needs of learners and society, ultimately increasing student engagement and motivation.

Keywords: Collaborative Language Learning, Penta Helix Model, Student Engagement, and Motivation.

INTRODUCTION

Collaborative language learning is a crucial aspect of enhancing student engagement and motivation in the classroom. The Penta helix model, which integrates the efforts of government, academia, the private sector, the community, and the media, offers a unique approach to fostering a collaborative learning environment. By leveraging the strengths of each stakeholder, the Penta helix model can create a synergistic effect that motivates students to learn and engage with materials more effectively (Febrianti & others, 2022).

Language learning is a critical component of education, as it enables students to communicate effectively across cultures and borders. However, language learning can be challenging, especially for students who are not native speakers. To address these challenges, educators have turned to innovative approaches, such as the Penta helix model, to enhance student engagement and motivation (Aprianto & Zaini, 2019).

Language Learning Strategies

Effective language learning strategies include:

Context-Based Strategies: Linking language learning to everyday contexts helps learners adapt quickly and feel more confident in communicating in the target language. Active Learning: Engaging learners actively in the learning process through group discussions, collaborative projects, and word games encourages critical thinking, creativity, and deeper understanding of the language. Technology Integration: Leveraging technology in language learning makes the process more engaging and dynamic, allowing learners to

study anytime and anywhere. Metacognitive Strategies: Understanding how we learn is key in this strategy. Learners are taught to plan, monitor, and evaluate their own learning processes, enhancing metacognitive awareness. Project-Based Approach; Learning through projects integrates various language aspects within the context of larger tasks, creating meaningful and relevant learning experiences (Oxford, 1996).

Furthermore, language learning has numerous benefits, including: 1) Improved Acquisition of Other Skills: Learning multiple languages enhances cognitive skills and improves the acquisition of other skills. 2) Promotes Employability: Proficiency in multiple languages is an asset in the modern working world, enhancing employability and career prospects (Fox et al., 2019).

Establishes Invaluable Connections and Cross-Cultural Friendships: Learning a language allows individuals to connect with a wider and more diverse range of people, fostering cross-cultural friendships and understanding

The Penta Helix Model

The Penta helix model is an innovative approach that combines five key elements to enhance language learning and teaching: 1) Needs-Based Curriculum: This approach focuses on the learners' needs and goals, ensuring that the curriculum is tailored to their specific requirements. 2) Learning Methods: The model incorporates various learning methods, such as role-play, interviews, and project-based learning, to engage students and promote active participation. 3) Theoretical Basis Construction: This element emphasizes the importance of theoretical frameworks, such as Communicative Language Teaching (CLT), in guiding language learning and teaching practices. 4) Strong Consideration of Basic Principles: The model stresses the need for language teachers and curriculum makers to consider the fundamental principles of language learning and teaching, including the integration of receptive and productive skills. 5) Technology Integration: The Penta helix model incorporates technology, such as language learning apps and online platforms, to make the learning process more dynamic and accessible (ПЕТРИШИНА et al., 2022).

Communicative Language Teaching (CLT)

CLT is an approach that emphasizes interaction and communication as the primary means of language learning. It involves learners engaging in conversations, role-plays, and interviews to develop their communicative abilities. This approach positions the teacher as a facilitator rather than an instructor, encouraging learners to incorporate their personal experiences into their language learning environment.

METHOD

The answer the formulation of the problem, the researcher used a qualitative approach with document analysis techniques, this research examined various documents, including books, research articles, and curriculum documents.

RESULTS AND DISCUSSION

The Penta helix model is a collaborative framework that integrates the efforts of five key stakeholders: government, academia, the private sector, the community, and the media. This model aims to foster a synergistic effect by leveraging the strengths of each stakeholder to achieve common goals. The five elements of the Penta helix model are:

1. **Government:** Provides policy support and resources for language learning initiatives.
2. **Academia:** Offers language courses and provides instructors who are experts in language teaching.
3. **Private Sector:** Provides internship opportunities or language training programs that cater to specific industry needs.
4. **Community:** Participates in language exchange events, cultural festivals, or language clubs.
5. **Mass Media:** Disseminates information and promotes language learning through various channels.

The Penta Helix model can influence student creativity in language learning in the following ways:

Integration Elements: The Penta Helix Model integrates five elements, namely Government, Non-Governmental Organizations, Private Sector, Higher Education, and Civil Society. This integration can increase student creativity by connecting various available resources and abilities.

Use of Innovative Learning Methods: The Penta Helix Model can be used as a basis for developing innovative learning methods that can increase student creativity. For example, using project-based learning methods that allow students to think creatively and take the initiative.

Use of Technology: The Penta Helix Model can use technology to enhance student creativity. For example, using applications or software that can help students think creatively and take initiative.

Innovative Use of Teaching Materials: The Penta Helix Model can be used to develop innovative teaching materials that can increase student creativity. For example, using multimedia-based teaching materials can help students think creatively and take initiative.

Use of Guidance and Coaching: The Penta Helix Model can be used to develop guidance and coaching that can increase student creativity. For example, using guidance and coaching that is based on student needs and potential.

Innovative Use of Evaluation: The Penta Helix Model can be used to develop innovative evaluations that can increase student creativity. For example, using evaluations based on results and processes can help students think creatively and take initiative.

Use of Collaboration with the Community: The Penta Helix Model can be used to develop collaboration with the community which can increase student creativity. For example, using collaboration with the community to develop projects that can help students think creatively and take initiative.

Use of Needs-Based Teaching Materials: The Penta Helix Model can be used to develop needs-based teaching materials that can increase student creativity. For example, using teaching materials that are based on student needs which can help students think creatively and take initiative.

Use of Learning Strategies Based on Potential: The Penta Helix Model can be used to develop learning strategies based on potential that can increase student creativity. For example, using learning strategies based on student potential can help students think creatively and take initiative.

By using the Penta Helix model, students can increase their creativity in language learning in the following ways:

Creative Thinking: Students can think creatively by connecting various available resources and abilities.

Take the initiative: Students can take the initiative by developing projects that can help students think creatively and take the initiative.

Participate: Students can participate by developing collaboration with the community which can help students think creatively and take initiative.

Adapt: Students can adapt by developing learning strategies that are based on student needs and potential.

Take the initiative: Students can take the initiative by developing projects that can help students think creatively and take the initiative.

Thus, the Penta Helix model can influence student creativity in language learning in an innovative and effective way.

The Penta Helix model can influence student creativity in language learning in the following ways:

1. **Integration Elements:** The Penta Helix Model integrates five elements, namely Government, Non-Governmental Organizations, Private Sector, Higher Education, and Civil Society. This integration can increase student creativity by connecting various available resources and abilities.
2. **Use of Innovative Learning Methods:** The Penta Helix Model can be used as a basis for developing innovative learning methods that can increase student creativity. For example, using project-based learning methods that allow students to think creatively and take the initiative.
3. **Use of Technology:** The Penta Helix Model can use technology to enhance student creativity. For example, using applications or software that can help students think creatively and take initiative.
4. **Innovative Use of Teaching Materials:** The Penta Helix Model can be used to develop innovative teaching materials that can increase student creativity. For example, using multimedia-based teaching materials can help students think creatively and take initiative.
5. **Use of Guidance and Coaching:** The Penta Helix Model can be used to develop guidance and coaching that can increase student creativity. For example, using guidance and coaching that is based on student needs and potential.
6. **Innovative Use of Evaluation:** The Penta Helix Model can be used to develop innovative evaluations that can increase student creativity. For example, using evaluations based on results and processes can help students think creatively and take initiative.
7. **Use of Collaboration with the Community:** The Penta Helix Model can be used to develop collaboration with the community which can increase student creativity. For example, using collaboration with the community to develop projects that can help students think creatively and take initiative.
8. **Use of Needs-Based Teaching Materials:** The Penta Helix Model can be used to develop needs-based teaching materials that can increase student creativity. For example, using teaching materials that are based on student needs which can help students think creatively and take initiative.

9. **Use of Learning Strategies Based on Potential:** The Penta Helix Model can be used to develop learning strategies based on potential that can increase student creativity. For example, using learning strategies based on student potential can help students think creatively and take initiative.

By using the Penta Helix model, students can increase their creativity in language learning in the following ways:

1. **Creative Thinking:** Students can think creatively by connecting various available resources and abilities.
2. **Take the Initiative:** Students can take the initiative by developing projects that can help students think creatively and take the initiative.
3. **Participate:** Students can participate by developing collaboration with the community which can help students think creatively and take initiative.
4. **Adapt:** Students can adapt by developing learning strategies that are based on student needs and potential.
5. **Take the Initiative:** Students can take the initiative by developing projects that can help students think creatively and take the initiative.

Thus, the Penta Helix model can influence student creativity in language learning in an innovative and effective way.

CONCLUSION

The Penta helix model offers a promising approach to enhancing student engagement and motivation in language learning. By integrating diverse stakeholders and providing opportunities for authentic language practice, the Penta helix model can help students develop the language skills and cultural awareness needed to succeed in an increasingly globalized world.

Additionally, language learning is a critical component of education, and innovative approaches like the Penta helix model and CLT can significantly enhance student engagement and motivation. By incorporating various strategies and technologies, educators can create effective language learning environments that cater to the diverse needs of students. Additionally, the importance of language learning extends beyond education, as it plays a vital role in conveying thoughts, opinions, and emotions, and in promoting employability and cross-cultural connections

ACKNOWLEDGMENT

Alhamdulillah rabbil 'aalamiin. Firstly, the researcher would like to express their highest gratitude to the almighty Allah SWT for their guidance, blessing, and mercy upon her, so the researcher can complete this article under the title “Collaborative Language Learning: The Penta Helix Model in Enhancing Student Engagement and Motivation “. Blessings and greetings may continue to be bestowed on the Prophet Muhammad SAW, who has been the prophet sent to bring mankind from the realm of ignorance to the age of knowledge as it is today. In finishing this article, many people have provided help, support, and advice that had assisted the researcher. In this valuable opportunity, the researcher would like to thank all of them whose assistance and cooperation made the successful completion of this article. The researcher would like to express her deepest thanks to their institutions and the committees.

Finally, the researcher would like to thank other parties that the researcher cannot mention one by one, for their help, support, advice, and motivation in completing this article. The researcher realizes that this article has not been completed perfectly. Therefore, criticism, suggestions and corrections will be appreciated may Allah SWT always protect, bless, and forgive us.
